5-cm bent metal extension tube

Finish: White

Description

The 5cm bent metal extension tube is a component designed to customise wall lamps. When attached to a wall rose it helps guide the lamp holder upwards or downwards, creating different light distribution effects.

How to adjust the lighting of your wall lamp?

This bent extension tube allows you to creatively direct the wall lamp's lighting. You can use it to aim the light upwards for ambient and diffused lighting, or downwards to focus on a specific area in the room. Alternatively, you can add two extensions to a two-hole ceiling rose to distinctively switch up your lamp's appearance.

How to install the tube

This accessory is easy to install. The tube features an M10x1 thread for rods or cable clamps at both ends, so just screw it into a wall rose and connect it to the lamp holder.

Can it be used outdoors?

The white, black and brushed stainless steel finish are also suitable for outdoor use.

Data Sheet

Bent metal extension tube:

External diameter: 13 mm

Length: 50 mm

Width: 50 mm

M10x1 thread on both ends

Attention: rod or cable clamp NOT included
